

## Title

### Challenges of co-creation of public spaces

## Content

The lecture will give short overview of characteristics of urban public space and green areas, present different possible dimensions and aspects of co-creation. With some examples presented, it will challenge the participants to think about potentials, obstacles and future possibilities of urban public space co-creation.

## Learning goals

1. Understanding the specificallities of urban open spaceand green areas
2. Widening the insight into co-creation
3. Learning about possible approaches and key challenges for co-creation of public spaces
4. Challenging the use of participants' own experiences and knowledge to search for new sollutions and possibilities for use of ICT for sucessfull co-creation on different levels.

## Key questions/challenges to be tackled in the workshop

1. What are the key aspects of co-creation and how to understand them within public space?
2. Who are/could/should be possible co-creators and how to involve them?
3. What "tools" do we need to enable and support co-creation?
4. What new possibilities and benefits new technologies could offer for co-creation?
5. Which key principles should be taken into consideration for co-creation of public spaces?
