Exploring modes of
collaborative city making in
the network/platform society

How can people produce
and manage public spaces
with the aid of technology?

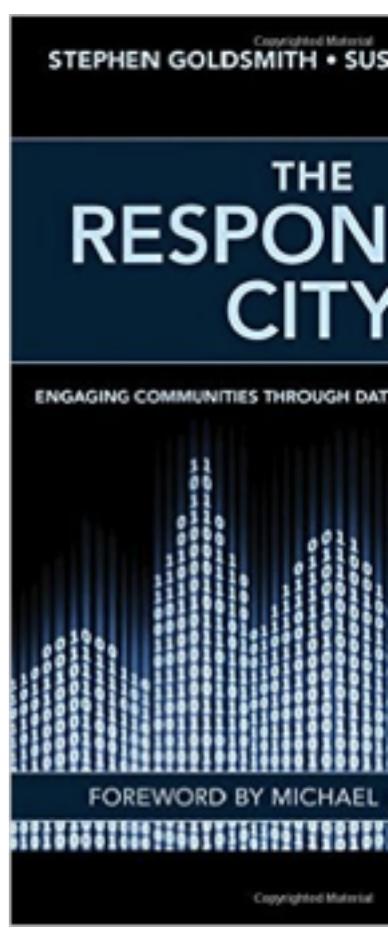

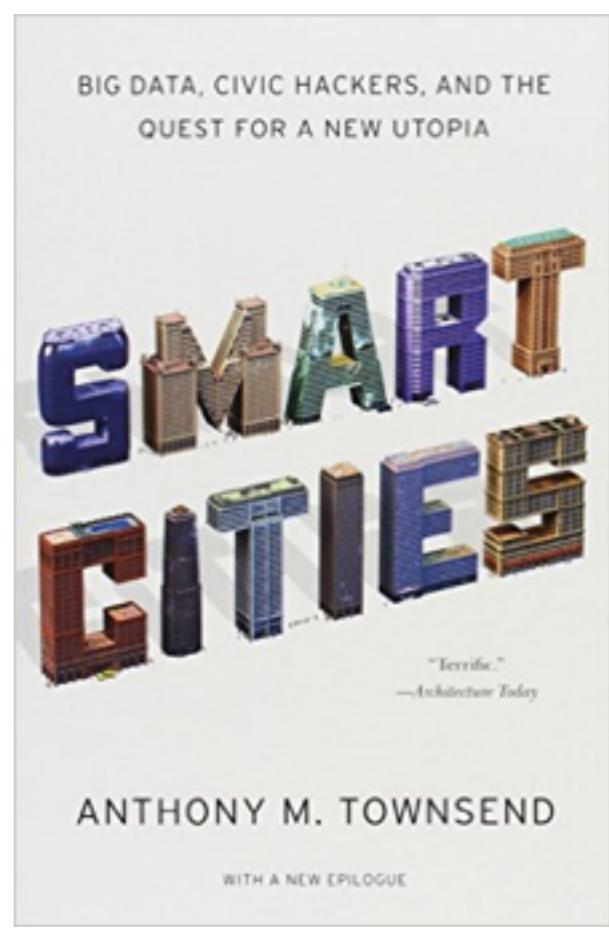

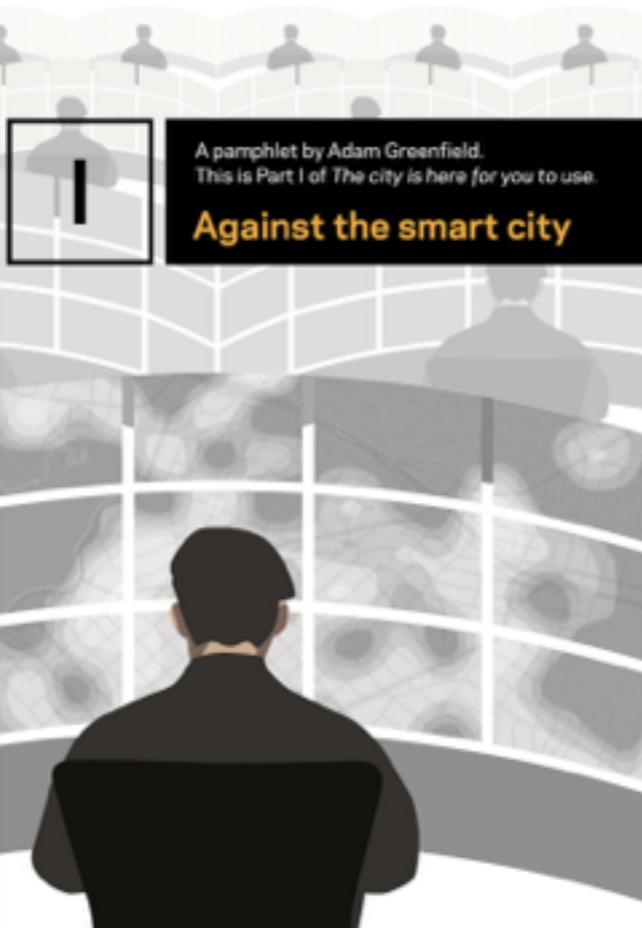

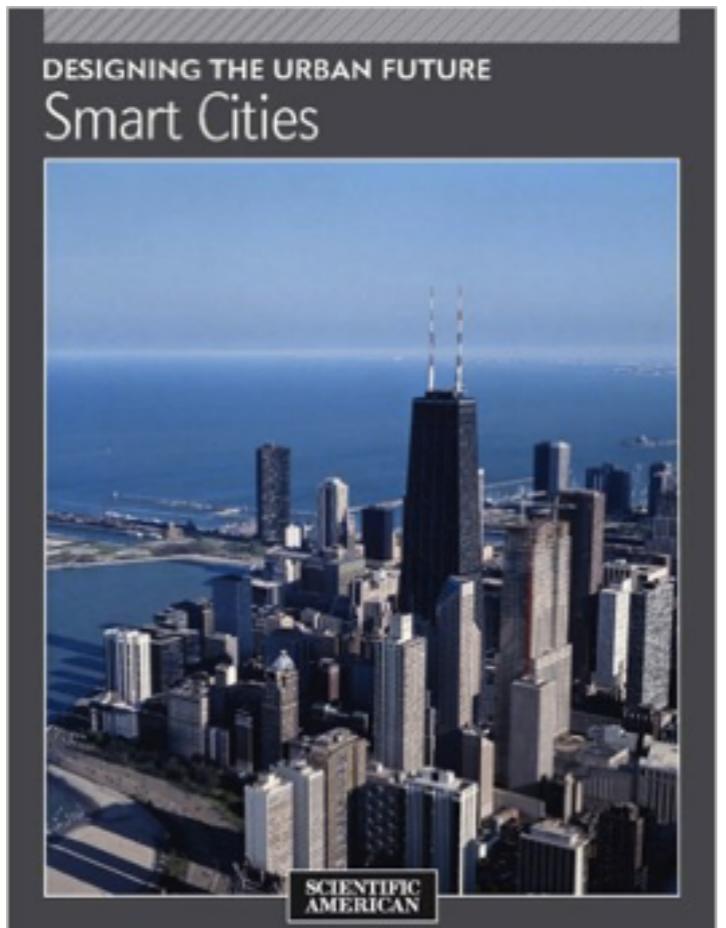

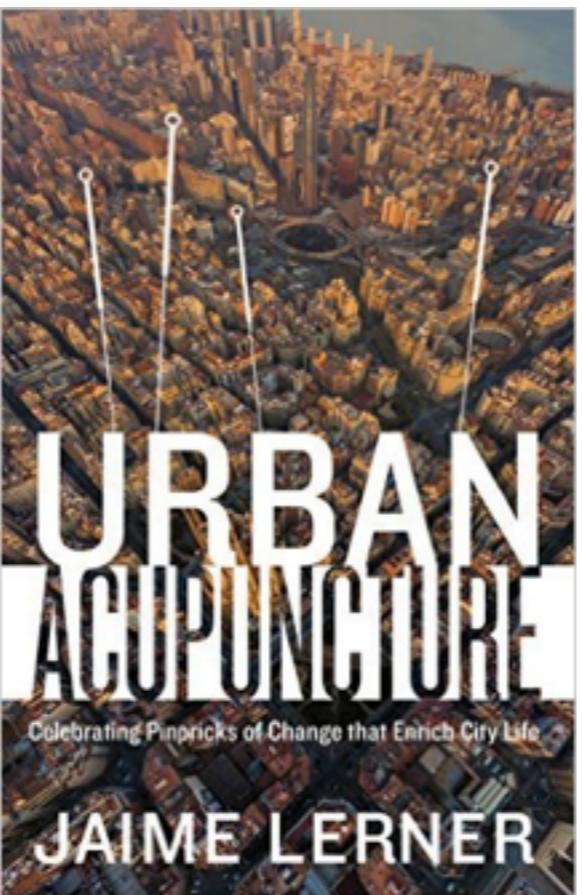

"Tactical Urbanism demonstrates the huge power of thinking small about our cities. It shows how, with a little imagination and the resources at hand, cities can unlock the full potential of their streets."
—Janette Sadik-Khan

Urban Pockets

Reclaiming the public
in left-over open spaces

1 Identification and involvement of a local partner

An NGO, a public or private institution, a design practice, having a rooted experience in intervention in the open spaces in the cities where they operate.

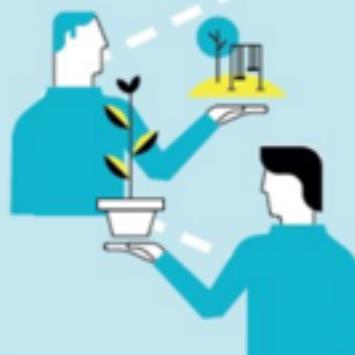

These are some of the organisations that have already been involved by URBANO in its International Cities Projects project.

2 Mapping spatial potentials

The mapping focuses on vacant lots or forgotten spaces at the very small scale, often in a state of decay, dumping sites for trash and building rubble, and unsafe public space.

Urban Pockets proposes a new way to work on the public realm, with citizens taking direct action in transforming and taking care of the places where they live.

3 Prioritizing site interventions

Prioritization of the interventions is based on their location within the city, their current uses, their ownership status and the interest of an engaged and self-established community.

4 Assessing motivation and needs of the community

A door-to-door survey in the neighbourhood assessing the needs, perceptions and wishes of the local community, is also a communication tool informing people of the ongoing process.

5 Involving the potential users

The results are presented and discussed during in-situ meetings with the local community. Simple visualizations help the residents to understand the possibilities offered by the site.

6 Co-design phase

In the co-design meetings a scale model is used to engage the local community, allowing them to select and locate desired elements and new functions by discussing and negotiating.

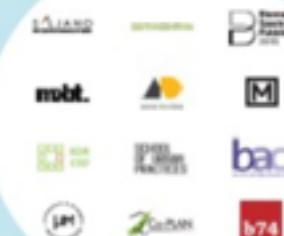

A simplified scale model was used in these during the co-design sessions helping the residents to visualize their ideas about the future of their spaces.

7 Co-finance

Three sources of funding support the implementation:

- Local funds, provided by local business and institutions.

9 Planning site maintenance

A year plan for the maintenance and management of the space is defined by all the actors involved in the process, with the eventual support of the municipality.

Strongly relying on constant *in-situ* assessment, the program has started with little interventions and now is incrementally being implemented in different contexts.
